

Wilkins Safety Group

Award Winning Health & Safety Consultants

Scaffold Inspection Services

25
YEARS
ANNIVERSARY

Professional Health & Safety Specialists

It is the scaffold user's/hirer's responsibility to ensure that all scaffolding has been inspected as follows:

- following installation /before first use,
- at an interval of no more than every 7 days thereafter,
- following any circumstances liable to jeopardise the safety of the installation e.g. high winds, flooding, vehicle striking a scaffold

It's about CONFIDENCE

The HSE are more willing than ever to prosecute the site owner for accidents. Having The Wilkins Safety Group to carry out your Independent Scaffold Inspections gives everyone confidence.

Scaffolding Contractors - Confidence that an independent third party is checking the scaffold, providing external confirmation of your expertise, and giving your customer the confidence that you are demonstrating due diligence on the project.

Principal Contractors/Site Owners - Confidence that an independent expert has checked the installation, and that every week a new check is made, with a report detailing any remedial action required, then a proper follow-up made.

Site staff - Confidence that they are working on a safe site, with the motivation that comes from the knowledge that site safety is given proper priority.

Some of the services offer:

- We will at our customers' request, attend the site and carry out detailed inspections and record our findings on a one off or weekly basis.
- This service can be provided to customers who have had scaffolding provided by another party and who do not have the qualified personnel to carry out the weekly inspections.
- Each inspection will be recorded and our findings given to the client for their files.
- One off inspection following a safety incident or dispute
- We recommend the use of the Scafftag® system, as this is a visual control of the scaffolds use and safety status.

All inspections are carried out by a Qualified CISRS Advanced Scaffold Inspector

After each scaffold inspection, you will receive a fully detailed scaffold inspection report within 24 hours of the scaffold inspection as per The Provision and Use of Work Equipment Regulation 1998, Report of results of every inspection made in pursuance of regulation 6(3).

The detailed scaffold inspection report will clearly detail the status/condition of the scaffold, the requirement for modification/remedy if there are faults and the time and date of the scaffold inspection.

The scaffold inspection will include all ladders, staircases and components of the scaffold, the design for more complex scaffolds will need to be produced upon arrival at site in order to perform the scaffold inspection prior to the scaffold inspection taking place.

We also offer a Safety Netting Inspection Service.
